

Ranking European Parliamentarians on Climate Action

EXECUTIVE SUMMARY

With the European elections approaching, CAN Europe wanted to provide people with some background information on how Members of the European Parliament (MEPs) and political parties represented in the European Parliament – both national and Europe-wide – have supported or rejected climate and energy policy development in the last five years. With this information in hand, European citizens now have the opportunity to act on their desire for increased climate action in the upcoming election by voting for MEPs who supported stronger climate policies and are running for re-election or by casting their votes for the most supportive parties. CAN Europe's European Parliament scorecards provide a ranking of both political parties and individual MEPs based on ten crucial climate and energy votes that took place during the 2009-2014 parliamentary term.

The votes in question cover proposals to improve the EU's Emissions Trading Scheme, the Mechanism for Monitoring and Reporting emissions, the 2030 renewable energy and energy savings targets, the 2020 greenhouse gas emission reductions target, the 2030 greenhouse gas emission reduction target, renewable energy policies, energy savings policies, the European support to the international climate negotiations, the integration of climate change in EU development policies and provision of international climate finance.

The scores were based on the votes of all MEPs on these ten issues. For each vote, MEPs were either given a point for voting positively (i.e. either 'for' or 'against', depending on if the text furthered or hindered the development of climate and energy policies) or no points for any of the other voting behaviours (i.e. 'against', 'abstain', 'absent', 'didn't vote'). Overall scores were assigned to each MEP by averaging out their points. The same was done for the European Parliament's political groups and all national political parties represented at the European Parliament, based on the points of their respective MEPs. Finally, scores were grouped into four bands that we named for ease of use: *very good* (75-100%), *good* (50-74%), *bad* (25-49%) and *very bad* (0-24%).

More information on the choice of votes and details of each vote (e.g. content, context, references) can be found in the Scorecards Background Document.

ABOUT

Regardless of their words and promises, it is the voting behavior of Members of the European Parliament that really shows what they and their national political parties are actually supporting. As we approach the 2014 European Parliamentary elections, Climate Action Network Europe provides you with this analysis on how political parties and their parliamentarians have voted in the last five years. The scorecard helps in understanding who has supported more adequate climate action in Europe.

The scorecards reflect how European parliamentarians have voted on ten climate and energy issues during the 2009-2014 parliamentary term.** Parliamentarians were given a point when voting in favor of more ambitious climate and energy policies, or no point if they didn't (including cases where they did not vote).

The scores of all parliamentarians were allocated to the different national political parties they represent.

For ease of use, all scores were labeled according to the amount of positive votes: very good ( 75-100%), good ( 50-74%), bad ( 25-49%), and very bad ( 0-24%).

For more detailed information, please consult our full Scorecards Background Document and Scorecards Analysis at www.caneurope.org/VoteForClimateAction

* This person has not been an MEP for the complete 2009-2014 term.

** The votes cover the EU's Emissions Trading Scheme, the 2020 and 2030 greenhouse gas emission reduction targets, renewable energy policies, energy efficiency policies, the international climate negotiations, climate in development policies, international climate finance and the Mechanism for Monitoring and Reporting.

ABOUT

Regardless of their words and promises, it is the voting behavior of Members of the European Parliament that really shows what they and their national political parties are actually supporting. As we approach the 2014 European Parliamentary elections, Climate Action Network Europe provides you with this analysis on how political parties and their parliamentarians have voted in the last five years. The scorecard helps in understanding who has supported more adequate climate action in Europe.

The scorecards reflect how European parliamentarians have voted on ten climate and energy issues during the 2009-2014 parliamentary term.** Parliamentarians were given a point when voting in favor of more ambitious climate and energy policies, or no point if they didn't (including cases where they did not vote).

The scores of all parliamentarians were allocated to the different national political parties they represent.

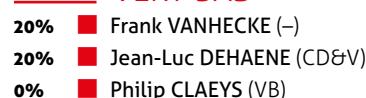

For ease of use, all scores were labeled according to the amount of positive votes: very good (■ 75-100%), good (■ 50-74%), bad (■ 25-49%), and very bad (■ 0-24%).

For more detailed information, please consult our full Scorecards Background Document and Scorecards Analysis at www.caneurope.org/VoteForClimateAction

* This person has not been an MEP for the complete 2009-2014 term.

** The votes cover the EU's Emissions Trading Scheme, the 2020 and 2030 greenhouse gas emission reduction targets, renewable energy policies, energy efficiency policies, the international climate negotiations, climate in development policies, international climate finance and the Mechanism for Monitoring and Reporting.

ABOUT

Regardless of their words and promises, it is the voting behavior of Members of the European Parliament that really shows what they and their national political parties are actually supporting. As we approach the 2014 European Parliamentary elections, Climate Action Network Europe provides you with this analysis on how political parties and their parliamentarians have voted in the last five years. The scorecard helps in understanding who has supported more adequate climate action in Europe.

The scorecards reflect how European parliamentarians have voted on ten climate and energy issues during the 2009-2014 parliamentary term.** Parliamentarians were given a point when voting in favor of more ambitious climate and energy policies, or no point if they didn't (including cases where they did not vote).

The scores of all parliamentarians were allocated to the different national political parties they represent.

For ease of use, all scores were labeled according to the amount of positive votes: very good ( 75-100%), good ( 50-74%), bad ( 25-49%), and very bad ( 0-24%).

For more detailed information, please consult our full Scorecards Background Document and Scorecards Analysis at www.caneurope.org/VoteForClimateAction

* This person has not been an MEP for the complete 2009-2014 term.

** The votes cover the EU's Emissions Trading Scheme, the 2020 and 2030 greenhouse gas emission reduction targets, renewable energy policies, energy efficiency policies, the international climate negotiations, climate in development policies, international climate finance and the Mechanism for Monitoring and Reporting.

ABOUT

Regardless of their words and promises, it is the voting behavior of Members of the European Parliament that really shows what they and their national political parties are actually supporting. As we approach the 2014 European Parliamentary elections, Climate Action Network Europe provides you with this analysis on how political parties and their parliamentarians have voted in the last five years. The scorecard helps in understanding who has supported more adequate climate action in Europe.

The scorecards reflect how European parliamentarians have voted on ten climate and energy issues during the 2009-2014 parliamentary term.** Parliamentarians were given a point when voting in favor of more ambitious climate and energy policies, or no point if they didn't (including cases where they did not vote).

The scores of all parliamentarians were allocated to the different national political parties they represent.

For ease of use, all scores were labeled according to the amount of positive votes: very good ( 75-100%), good ( 50-74%), bad ( 25-49%), and very bad ( 0-24%).

For more detailed information, please consult our full Scorecards Background Document and Scorecards Analysis at www.caneurope.org/VoteForClimateAction

* This person has not been an MEP for the complete 2009-2014 term.

** The votes cover the EU's Emissions Trading Scheme, the 2020 and 2030 greenhouse gas emission reduction targets, renewable energy policies, energy efficiency policies, the international climate negotiations, climate in development policies, international climate finance and the Mechanism for Monitoring and Reporting.
